1. Release 3.2.1

This section briefly lists changes to AI Ops for this release.

1.1 RELEASE HIGHLIGHTS

1.1.1 Rollback to a previous version

Database schema is not compatible with previous releases. Once updated, it is not possible to rollback to the previous version without restoring from the backup.

1.2 BUGS

- [AP-29315] - Problem: Problems are not loading on rnd-master UI
- [AP-29317] - Problem: Scroll bar is missing on "Rules" page.
- [AP-29322] - Integration: Confluence import fails when user adds page having tables.
- [AP-29365] - ServiceNow Ticket Integration -- SNOW Incident Integrations for Global client is still on the selection list
- [AP-29391] - Correlation: Dropdown for eventfields should support search and pagination
- [AP-29404] - Overlap issue seen when tried to Generate Automation with/without Knowledge article
- [AP-29416] - Integrations :: Sample Payload is overlapping in UI for Event Webhook Async Integration
- [AP-29452] - Automations: Update Automations Lite to align with new module names
- [AP-29454] - Zabbix Streaming Event/Metric Integration issues for Timeout Hours and Minutes.
- [AP-29521] - Resolve with AI and RCA actions should use RBAC
- [AP-29554] - Correlation: show icons in event fields dropdowns to differentiate different types of fields

1.3 EPIC

None in this release.

1.4 STORY

- [AP-29210] - Tasks: Make Task Summary a function that can be turned off
- [AP-29500] - Tasks: Rename button "Generate Automation" in Task view

1.5 TASKS

- [AP-29458] - Address ALite security vulnerabilities
- [AP-29583] - Resolve with AI and RCA actions should use RBAC [UI]
