1. Release 3.6.2

This section briefly lists changes to AI Ops for this release.

1.1 RELEASE HIGHLIGHTS

1.1.1 Rollback to a Previous Version

The database schema is compatible with version 3.6.1. If a rollback is needed, AIOps can be downgraded to 3.6.1 without requiring a full backup restoration.

1.2 BUGS

- [AP-30247] - A bug was fixed where custom child workflows weren't automatically linked to parent workflows upon import, requiring manual linking. This update improves the linking process, especially when promoting workflows from UAT to production. It mainly impacts backend processes, benefiting developers and operations teams.

1.3 EPIC

None in this release.

1.4 STORY

None in this release.

1.5 TASK

None in this release.

1.6 SUB-TASKS

None in this release.
