1. Release 3.8.0

This section briefly lists changes to AIOps for this release.

1.1 RELEASE HIGHLIGHTS

None with this release.

1.2 BUGS

- [AP-30456] - The issue with missing tags in automation matchers was resolved, ensuring automations execute as expected. The change affected the AIOps automation management section and was necessary to fix automation execution failures. This change impacts backend systems, improving automation processes for customers.

1.3 EPIC

None in this release.

1.4 STORY

None in this release.

1.5 TASK

- [AP-30321] - The ticket upgraded vulnerable libraries like 'netty' and 'spring-expression' to address security issues in the IPautomata Execution Service. It focused on backend security, with no UI impact, primarily affecting development and operations teams.
- [AP-30256] - Setup ALite for backwards compatibility testing.
